

EDUCATION

Yale University

Computer Science (BS)

May 2019

EXPERIENCE

OTseek (Pear VC - PearX W26)

Technical Co-Founder

Nov. 2025 – Jun. 2026

- Took pre-seed company 0→1 twice in 8 months, from customer discovery to production with institutional bond traders and later with US local government customers; wound down amicably with investors in June 2026
- Built agent-native engineering discipline embracing Codex and Claude Code without producing slop via ergonomic property-based testing, formal methods, pair programming, and evangelizing weekly retros and real human writing
- Navigated bank, hedge fund, and government compliance and procurement successfully; negotiated production NASDAQ connectivity; and earned OpenAI approval to launch native ChatGPT App integration in first public wave

Healthyr (NYC)

Principal Product Engineer

Sep. 2024 – Nov. 2025

- Launched and scaled flagship app delivering gamified clinical interventions to 70,000 patients that drove daily behavior leading to clinically significant reductions in metabolic syndrome, alongside fewer ER visits and lower cost of care
- Founded lean product team (design/eng/clinical) and ran weekly live experiments enabling winning ideas and protocols to go from prototype to production in less than a week while protecting patient safety and system integrity (HITRUST)
- Owned product vision through execution; pivoted to SMS + real-time voice LLM to grow rural usage 10x industry avg.

Humana (Incubation Lab)

Senior Product Manager

Oct. 2020 – Sep. 2024

- Trusted by Chief Strategy Officer to advise on short and medium-term AI deployment risks across clinical, admin, and internal lines of business; incubated software rails for repeatable, safe launches of public and internal AI products
- Embedded with ML scientists and clinical pharmacists to turn medication-refill risk prediction research and modeling into a SoTA predictive capability that social workers use to prioritize and address needs of high-risk patients sooner
- Mentored two bootcamp students from their prior foodservice jobs into full-time product engineering roles in 32 weeks

AndKids (Beijing)

STEM Teacher

Jun. 2019 – Feb. 2020

- Created a maker community of students and parents invested in STEM education integrating 3D printing, robotics, and coding into the curriculum, which broke records for cohort science and reading improvement (+60%, DIBELS)

PROJECTS

- Shipping OSS, including an AI running coach and an MCP for brokered access to private health data
- Placed museumgoers in the center of the action via precise personalized spatial sound effects, with technology imagined in 2017, later featured in the 2024 re-launch of the Yale Peabody Museum
- Produced mainstage musicals and engineered aerial elements from 2016 to 2019, with projects like *Reverie* that incorporated robotic arm holograms, now emerging in Broadway immersive shows
- Embedded 16 (now graduated) first-years into the sociocultural fabric of Yale as a backpacking trip leader

SKILLS

- Codebase contributor (Python, Rust, C, DuckDB, Postgres, TypeScript, Apple Developer, Swift, Expo)
- Adventurer (PADI Advanced Scuba Diver, NYC Marathon Finisher, Horse-assisted Therapy Provider)
- AI builder (TensorFlow, PyTorch, Parquet, Vortex, Frontier LLM/Agent API/SDK/MCPs)
- Cloud-native (AWS, GCP, Azure, K8s, Terraform, gVisor)
- Driven by feedback (Statsig, SQL, Langfuse, Datadog, Kraftful)
- Lifelong learner (Chinese, ASL)
